Stephen,

I have begun reviewing the data on Chef Menteur elevations. I have some questions with respect to the file entitled "B110162B-9-28-12". First, I assume that the unit of measurement in the upper right corner (Chart LJC265_110162) is feet. Could this be confirmed? Second, the legend (bottom left) has a pink circle with the number "1" for an undated data set. Presumably this data set is shown in the table on the upper left. Could the sponsor please clarify the elevation data (and date) to which this symbol corresponds? Finally, the table which shows a 0.665 average elevation for 95 points needs to be explained. What is the date these 95 elevations were shot? Or is this an average of some other data sets (e.g., group 1-4)? If the latter, what is its utility? Thanks in advance for your assistance.
